

EdReadyMontana.org

EdReady Montana is a program for all students in Montana from middle school through college who want to prepare for upcoming math and English classes or any math and English curriculum. EdReady helps supplement skills and allows students to revisit possible gaps in general math and English skills. EdReady Montana helps all students become better prepared for college math and English, or helps them practice skills needed for a desired career path.

Because EdReady Montana is free to ALL math learners in Montana, it has started to become popular with homeschooled students and parents across the state.

What is EdReady Montana?

EdReady creates an individualized Learning Path that allows students to work independently, at their own pace.

It is a math supplement that covers topics ranging from whole numbers through trigonometry.

EdReady is an online program that works ANYWHERE the Internet is available with your password and login info.

It is a proven program that is ABSOLUTELY, 100% FREE!

EdReady is an innovative approach to math skill building, designed by NROC, an independent, community-minded nonprofit committed to creating multi-media learning tools.

How are homeschoolers using EdReady?

Homeschoolers can use EdReady in a variety of ways. Some parents have their children use EdReady every morning for several hours, as they work through their individualized learning paths. Other parents have their children work for shorter time periods—for thirty minutes or so. As one parent puts it, “We can even slip math in on a Saturday for a thirty minute practice. I like the fact that homeschoolers as young as 9 can work on fourth-grade readiness, and my older children can prepare for college with the HI-SET prep or college readiness prep.”

Here is what some of our home school parents and students are saying:

--“I like the fact that EdReady is being used in schools and in colleges. As my son advances, it’s good to see that he’s on track with the public schools.”—Karen, homeschooling Mom of Hunter, 12 and Lauren, 10

--“As a parent I like refreshing up on skills myself. You watch an example and within minutes, you can keep sharp, as well. Instead of flipping through a book, you can use the videos.”—Karen, homeschooling Mom of Hunter, 12 and Lauren, 10

--You see them progress up the scale and how excited they get. It’s so easy to use!”—Karen, homeschooling Mom of Hunter, 12, and Lauren, 10

--“I like it because it’s very thorough, It works well with the ACE curriculum, but explains things more.”—Cassie, homeschooling Mom of Ain, 19, Daniel, 16, Bethany, 14, and Grace, 12

--It was frustrating teaching math and I needed extra help on my end as well. They get very excited when they master a topic.”-- Cassie, homeschooling Mom of Ain, 19, Daniel, 16, Bethany, 14, and Grace, 12
